

## Park visits powered by Google Sheets!

Zzapps has created a web page where visitors can sign up for a visit to the park and which stores data in spreadsheets, and uses Google Slides as a template to print tickets.

### The challenge

The existing solution of buying tickets online was not flexible enough for specific events, in this case Halloween. The park needed to sell tickets and scan them at the entrance. They need to be able to scan 1000 tickets per hour for validity.

### The solution

A web application is communicating with Apps Script. Apps Script is storing visitor information into spreadsheets, communicates with the payment provider, and renders tickets using Google Slides and Google Charts for the barcode. It then sends tickets to the visitors. At the entrance, a mobile web-app scans the barcode, connects to the spreadsheet and returns validity of the ticket.

### The results

Kasteelpark is able to scan over 1000 people per hour for special events at their park, preventing long lines at the entrance. It is ready for future and it is easy to configure by using existing tools like Sheets and Slides. The recurring costs are very low, only the Workspace subscription is needed!

Park visitor registration powered by Google Sheets and Slides

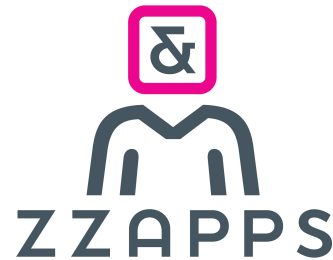

#### About Kasteelpark Born

Born Castle Park is a medium-sized animal park located in the gardens of the former Born Castle. It houses different types of animals, including native animals such as deer, sheep and goats, as well as exotic animals such as rheas, alpacas, porcupines, predators and monkeys.

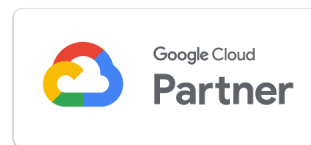

Industry: Tourism & Leisure

Primary project location: Netherlands

#### About Zzapps BV

Zzapps are Google Cloud platform specialists who support their clients with the use of Google Workspace and custom-built software.
